Information Security Policy

Larkspur Logistics · Tomas Lindqvist · 12 June 2023

Purpose

This policy protects customer data, robot telemetry and Larkspur's own systems. It applies to every employee, contractor and partner with access to Harbor or to customer sites.

Access

Access follows least privilege. Multi-factor authentication is mandatory for Harbor, email and source code. Access to customer telemetry is reviewed every quarter by the security lead, Tomas Lindqvist.

Data handling

Customer order data stays in the customer's region and is encrypted at rest and in transit. Robot camera images are processed on the robot and are never stored unless a safety event occurs.

Incidents

Any suspected incident must be reported to the security channel within one hour. Customer-affecting incidents receive a written postmortem within five working days.
